Summary

Data Analyst with strong experience in SQL, Python, and Business Intelligence tools. Skilled in data cleaning, visualization, and building analytical dashboards to support decisionmaking. Completed multiple projects including sales analysis, customer segmentation, and financial transaction analysis. Passionate about solving business problems and transforming raw data into actionable insights through analytics and visualization.

Education

Faculty of Computer Science, MET Academy – Mansoura. 2022 – 2026

Skills

Programming & Querying: Python, SQL Server

Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), Data Manipulation

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn

Data Visualization: Power BI, Excel, Google Sheets, Matplotlib, Seaborn

Tools & Version Control: Git, GitHub

Projects

E-commerce Sales Analysis

- Analyzed online store sales data using Python (Pandas, Matplotlib, Seaborn).
- Discovered top-selling products, seasonal trends, and customer purchasing behavior.
- Built visual reports to support business growth strategies. **GitHub:** [GitHub Project Repository](#)

Titanic Survival Analysis

- Conducted exploratory data analysis on the Titanic dataset using Python (Pandas, Seaborn, Matplotlib).
- Visualized survival rates by gender, age, and passenger class.
- Applied statistical insights for data-driven storytelling. **GitHub:** [GitHub Project Repository](#)

Bank Transactions Analysis

- Used SQL and Python to analyze customer transactions.
- Identified spending patterns and customer segmentation.
- Designed interactive dashboards in Power BI to track customer behavior. **GitHub:** [GitHub Project Repository](#)

Movies Data Analysis

- Collected and cleaned movies dataset (100+ real movies).
- Used Python (Pandas, Matplotlib, Seaborn) to analyze revenue, budget, and profit trends.
- Built Power BI dashboard to visualize top-grossing movies, genre performance. **GitHub:** [GitHub Project Repository](#)
