SUMMARY

Data Analyst student with hands-on project experience in SQL, Python, and Business Intelligence tools. Skilled in data cleaning, exploratory data analysis, and building interactive dashboards to support decisionmaking. Completed multiple end-to-end projects covering HR analytics, sales performance, and real estate—passionate about transforming raw data into actionable insights.

EDUCATION

Faculty of Computer Science — MET Academy, Mansoura Bachelor's
Degree in Computer Science | 2022 – 2026

SKILLS

Programming & Querying: Python, SQL Server

Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), Data Manipulation

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn

Data Visualization: Power BI, Excel, Google Sheets, Matplotlib, Seaborn **Tools &**

Version Control: Git, GitHub

PROJECTS

HR Attrition Analysis | Python · SQL Server · Power BI | [GitHub](#)

- Developed an end-to-end HR analytics pipeline to identify key drivers of employee attrition.
- Performed data cleaning and EDA using Python (Pandas, Matplotlib, Seaborn).
- Queried and transformed data via SQL Server, then built an interactive Power BI dashboard to visualize turnover trends across departments, age groups, and job roles — enabling data-driven retention decisions.

Movies Analysis | Python · SQL · Power BI | [GitHub](#)

- Built an end-to-end analytics project analyzing 100+ real-world movies to uncover profitability patterns and revenue trends.
- Used Python (Pandas, Matplotlib, Seaborn) to analyze revenue, budget, and profit trends across genres.
- Delivered an interactive Power BI dashboard showcasing top-grossing movies, genre performance, and box office insights.

Retail Sales Analysis | Excel · Power BI | [GitHub](#)

- Analyzed retail sales data to uncover performance trends across products, customer segments, and regions.
- Performed data cleaning and aggregation in Excel, and built an interactive Power BI dashboard visualizing sales, profit margins, and regional performance.

Real Estate Data Analysis | SQL Server · Power BI | [GitHub](#)

- Conducted comprehensive data cleaning and transformation using SQL Server on a real estate dataset.
- Built an interactive Power BI dashboard to visualize property trends, pricing patterns, and market performance.

Car Price Prediction | Python · Scikit-learn · Pandas · Matplotlib | [GitHub](#)

- Built a Machine Learning regression model to predict used car prices based on features including age, mileage, fuel type, and transmission.
- Performed data preprocessing, feature engineering, and model evaluation to achieve accurate price estimates.
